

# CODING

Coding is basically the computer language used to develop apps, websites, and software. Without it, we'd have none of the most popular technology we've come to rely on such as Facebook, our smartphones, the browser we choose to view our favorite blogs, or even the blogs themselves. It all runs on code.

The govt has announced several new reforms, under the New Education policy (**NEP 2020**).

Among many other reforms announced, **the govt has already declared that coding will be taught from Class VI onwards.**

**Hence it is the need of the hour to introduce coding in our present computer curriculum .**

We are really indebted to **Koushik of Tathya Education Technology Pvt Ltd** for coming up with the idea of introducing coding for our students, at no extra cost, whatsoever...

We will begin with **class V itself. They might just scratch the surface, but gradually will be future ready.**

We all know English, Maths... at least we all have a working knowledge of it through which we can talk. **Gradually, coding will have that importance in 2 years from now, if not earlier** And our ignorance will not stop it from happening. **The future is already here ...**

And so are we!! We seize this opportunity to make our students future ready, this moment onwards.
